

Amending Rorts Watch

How to add or edit a rort.

The list is one text file

Open **rortswatch/rorts.txt**. Each rort is a block, separated from the next by a line of three dashes: ---

Fields

NAME, JURISDICTION (Federal / NSW / ...), CATEGORY, COST (e.g. \$100 million), SEVERITY (1 mild – 10 egregious), DESCRIPTION, and ACTION (optional). Lines starting with # are ignored.

Add a rort

Copy an existing block, add --- above it, and fill in the fields. Save. The page rebuilds its tiers, cost banner and filters automatically.

Note

The page loads the list live from rorts.txt when deployed; a baked copy is kept so the local preview also shows the list. After big edits, re-bake the preview (or just view it on the deployed site).
