

Adding a podcast episode

How to publish a new Keep the Bastards Honest episode.

1. Create the episode page

Add a new file **podcasts/<slug>.html**. Give it the title (start with the episode number, e.g. "41. ..."), the date, and the description.

2. Paste the player embed

Copy the episode's **Castos** (or Spotify) **<iframe>** embed code and paste it into the page's player area, verbatim. This is what makes the audio appear.

3. Image + register

Save a cover as **assets/img/pod-<slug>-01.webp**, then add an entry to **podcasts/index.json** `{"slug","title","date","episode","image","file","hasEmbed":true}`. The hub features the highest-numbered episode and lists the rest.

Sources

The "Listen & subscribe" links (Spotify, Apple, YouTube, RSS) are show-level and already on every episode + the hub.
